

Claim Sheet – Unique Project Proposals

Author: Zhivko Zhelev

Partner: ChatGPT

This document contains short and clear claims for four main projects developed within the framework of “*Club Bulgaria: Factory for Inventions*”. The aim is to highlight the uniqueness and innovations of each project.

Project: Holographcho

1. A system that combines light, water, and multilayered media to create stable holographic images.
2. Use of a water layer with controlled wave modulation for stabilization and enhancement of holographic visuals.
3. Combination of diffractive film and water medium to achieve true three-dimensional visualization.
4. Capability for photonic computations through the interaction of light and material media.
5. Applications in visualization, parallel photonic computations, and interactive environments.

Project: Air Highways

1. Elevated P-shaped reinforced concrete structures with integrated cooling rails.
2. Cars can be lifted from existing roads and attached to the upper track.
3. Reduces congestion in metropolitan areas while using the current infrastructure.
4. Hybrid solution allowing traditional cars to integrate into the elevated highway.

Project: Bulgarian Supercar

1. Modular car for enthusiasts, consisting of pre-produced chassis and body kits.
2. Affordable and easy to assemble, customizable by the buyer.
3. Supports both classic and electric drive options.

Project: Bulgarian Family Car

1. Affordable and safe car (chassis + body) that clients can order and assemble.
2. Targeted for family use, produced in Bulgaria with local resources.
3. Provides opportunities for domestic manufacturing and local employment.
